

# ♀ Evolve Female FertilityReady™ Screen

## #1 in Genetic Fertility Screening

The first and leading female genetic screen to assess reproductive health.

**Female infertility contributes to a significant amount of infertility cases. Approximately 10% of female infertility has a genetic factor.**

**Evolve Female FertilityReady™ Screen analyzes the most common genetic causes of infertility** and factors that can impact reproductive success, either when attempting to conceive naturally or when undergoing assisted reproductive technologies (ART). **Traditional physical and laboratory examinations for infertility cannot detect these genetic factors** and often times misdiagnosis or delay diagnosis of an underlying genetic abnormality. Genetic screening allows for a more **personalized and refined diagnosis** and the potential for **tailored fertility treatments**.

### What's included on the Female FertilityReady™ Screen?

A superior genetic screen using **the latest Next Generation Sequencing (NGS)** technologies for sequencing + deletion/duplication analysis of **genes associated with fertility + MolecularKaryotype™**.

We provide **High Accuracy & Detection Rates of >99% for most genes screened** to assess your reproductive risks at the genetic level.

### Bringing a New Perspective to infertility care: Who should have the Evolve Female FertilityReady™ Screen?

#### Testing indications include:

- Personal or family history of infertility
- Diminished ovarian reserves (DOR)
- Premature ovarian failure (POF)
- Recurrent implantation failure (RIF)
- Hypogonadotropic hypogonadism (HH)
- Recurrent pregnancy loss (RPL)
- Women who are considering delaying having children until after age 35 or are contemplating ART especially IVF.
