

♀ Evolve POF FertilityReady™ Screen

#1 in Genetic Fertility Screening

The most advanced and comprehensive Premature Ovarian Failure (POF) Screen in the market.

POF is a condition of diminished fertility in women. POF is associated with low or poor reserve of eggs relative to what is expected at any given age.

Evolve POF FertilityReady™ Screen reveals if a woman has or may develop diminished ovarian reserves (DOR) due to genetic causes. Although, POF is common it can present in a number of different ways such as secondary amenorrhea or menopausal symptoms. Genetic screening allows for a **more personalized and refined diagnosis** and the potential for **tailored fertility treatments**, including the opportunity to optimally manage your family planning by using storage/freezing of eggs.

What's included on the POF FertilityReady™ Screen?

A superior genetic screen using **the latest Next Generation Sequencing (NGS)** technologies for sequencing + deletion/duplication analysis of **>20 genes**.

EvolveGene® performs **the most accurate Fragile X syndrome testing**, premutation carriers not only have a high risk of developing POF but they also have an increased risk of having a child with the genetic disorder.

Bringing a New Perspective to infertility care: Who should have the Evolve POF FertilityReady™ Screen?

- Women experiencing infertility challenges with a personal or family history of ovarian insufficiency
- Women who are considering delaying having children until after age 35 or are contemplating ART especially IVF

Evolve Advantages: POF FertilityReady™ Screen
